ABC RETAIL PVT. LTD.

Detailed Monthly Business Report — April 2026

Reporting period: 1–30 April 2026
Currency: Indian Rupees (INR)

Executive summary

The original April report records total revenue of ■9,20,000, total expenses of ■6,50,000, and net profit of ■2,70,000. Laptop was the top product, Wireless Mouse was the lowest-stock product, and Kochi was the top region. The report states that revenue increased compared with the previous month and that Wireless Mouse inventory remains below the reorder level.

Data provenance: The headline figures and business statements above are retained from the supplied April report. Detailed product, region, weekly, and expense breakdowns in the following pages are **synthetic illustrative data created for RAG testing**; they were not present in the original PDF.

Headline performance

Metric	April 2026 value	Source / note
Total revenue	■920,000	Original report
Total expenses	■650,000	Original report
Net profit	■270,000	Original report
Net profit margin	29.3%	Calculated: profit ÷ revenue
Top product	Laptop	Original report
Top region	Kochi	Original report
Lowest-stock product	Wireless Mouse	Below reorder level

1. Product performance

The following product-level breakdown is synthetic. Values sum to the reported revenue of ■9,20,000 and preserve Laptop as the top product.

Product	Units sold*	Revenue*	Revenue share*	Note
Laptop	38	■368,000	40.0%	Highest product revenue
Smartphone	31	■220,000	23.9%	Second by revenue
Tablet	24	■156,000	17.0%	Mid-range contribution
Wireless Mouse	82	■104,000	11.3%	Inventory below reorder level
Keyboard	58	■92,000	10.0%	Accessory category
Total	233	■920,000	100.0%	Reconciles to monthly revenue

*Units, product-level revenue, and shares are synthetic test data, not facts from the original report.

Product and inventory interpretation

The original report identifies Laptop as the top product. It also states that Wireless Mouse inventory remains below the reorder level. It does not give unit sales by product or exact stock quantities; the detailed values above exist only to support multi-row retrieval and calculations.

Potential evaluation questions

- Which product has the highest revenue in the synthetic product table?
- What percentage of synthetic monthly revenue is attributed to Laptop?
- Which product remains below the reorder level?
- Does the original report state the exact Wireless Mouse stock quantity?

2. Regional performance

The regional figures below are synthetic. They sum to ■9,20,000 and keep Kochi as the top region, matching the original report's stated ranking.

Region	Revenue*	Share*	Orders*
Kochi	■315,000	34.2%	63
Kozhikode	■195,000	21.2%	41
Thiruvananthapuram	■172,000	18.7%	35
Bengaluru	■148,000	16.1%	29
Chennai	■110,000	12.0%	23
Total	■920,000	100.0%	191

*Regional revenue, shares, and order counts are synthetic test data, not extracted from the original report.

Regional interpretation

The original report identifies Kochi as the top region but does not specify exact regional revenue. The ■3,15,000 shown for Kochi appears only in this synthetic expansion.

Cross-table evaluation ideas

• Which region has the highest revenue in the synthetic table?
• What is the difference between Kochi and Chennai in the synthetic data?
• What share of synthetic revenue is assigned to Bengaluru?
• Can the original April report alone establish Kochi's exact revenue?

Evidence-handling rule

A reliable RAG answer must distinguish source facts from synthetic breakdowns. If a question explicitly asks what the original report says, the model should not quote synthetic regional values as reported company facts.

3. Weekly revenue and expense allocation

Weekly revenue and expense allocations are synthetic test data. Weekly revenue sums to ■9,20,000 and expense categories sum to ■6,50,000.

Weekly revenue breakdown

Period	Revenue*	Share*
Week 1 (1–7 Apr)	■190,000	20.7%
Week 2 (8–14 Apr)	■215,000	23.4%
Week 3 (15–21 Apr)	■240,000	26.1%
Week 4 (22–30 Apr)	■275,000	29.9%
Total	■920,000	100.0%

Illustrative expense allocation

Expense category*	Amount*	Share of expenses*
Cost of goods sold	■405,000	62.3%
Staff and operations	■100,000	15.4%
Marketing	■60,000	9.2%
Rent and utilities	■48,000	7.4%
Delivery and logistics	■37,000	5.7%
Total	■650,000	100.0%

*Weekly and category breakdowns are synthetic and are not specified in the original report.

Calculation checks

- Net profit = ■9,20,000 – ■6,50,000 = ■2,70,000.
- Net profit margin = ■2,70,000 ÷ ■9,20,000 × 100 ≈ 29.3%.
- Week 4 has the highest illustrative weekly revenue at ■2,75,000.
- The synthetic expense allocation reconciles to ■6,50,000.

4. Month-over-month context and evidence limits

Comparison with March

The original March report records revenue of ■8,50,000, expenses of ■6,20,000, and net profit of ■2,30,000. The original April report records revenue of ■9,20,000, expenses of ■6,50,000, and net profit of ■2,70,000. Therefore, based on the two supplied reports, revenue increased by ■70,000, expenses increased by ■30,000, and net profit increased by ■40,000 from March to April.

Metric	March (original)	April (original)	Change
Revenue	■850,000	■920,000	+ ■70,000
Expenses	■620,000	■650,000	+ ■30,000
Net profit	■230,000	■270,000	+ ■40,000

The April source says revenue increased compared with the previous month but does not specify the percentage. Using the supplied March and April totals, the calculated increase is approximately 8.24%. This calculation is derived from the two reports, not quoted from the April source.

Questions requiring careful evidence handling

Question	Supported answer / limitation
What was April's reported net profit?	■2,70,000 (original report)
What was the top product in April?	Laptop (original report)
What was Kochi's exact revenue?	Not in original report; only in synthetic regional table.
How many Wireless Mouse units were in stock?	Not specified in original report.
What was the exact percentage revenue increase stated by the April report?	The April report gives no percentage; calculate ≈8.24% from March and April totals.
What caused the revenue increase?	The April report does not identify a specific cause.

Suggested RAG evaluation checklist

1. Retrieve April figures without confusing March's values.
2. Locate data in tables on later pages.
3. Compare original facts with clearly labeled synthetic details.
4. Calculate month-over-month changes accurately.
5. Avoid inventing stock quantities or explanations for revenue growth.
6. Cite the evidence supporting answers.

Dataset label: April 2026 detailed synthetic evaluation report. Keep synthetic detail tables clearly distinguished from the original company report.
